The best preparation is to work through the free past papers, from the BMAT website, under examination conditions. The most successful candidates spend around 21 to 30 hours preparing for the test.

**Did you know?**

The Biomedical Admissions Test is a paper-based two-hour test for students. The BMAT assesses mathematical and scientific knowledge alongside aptitude. It has separate papers that test:

- Generic skills in problem solving, understanding arguments, and data analysis and inference
- The ability to apply the scientific knowledge typically covered in school science and mathematics by the age of 16
- The ability to select, develop and organise ideas, and to communicate them in writing, concisely and effectively.

Tests are undertaken in school (if it is an authorised test centre) or at one of the centres located across the UK and overseas. Results are either automatically fed through to your chosen medical schools or with the October test you choose which medical schools to share your results with online. Your BMAT results can be used to:

- Decide whether to invite a student to interview
- Inform whether an offer should be made
- Decide between two equally ranked applicants

Many medical schools may rank your BMAT score, as one element amongst others considered within the admissions process. Every medical school will detail on their website how the tests will be used within the admissions process.

**Useful stuff**

**WHAT DO MEDICAL SCHOOLS WANT TO SEE?**

- Your score from one year will not affect your chances of re-applying in later years, as each application is considered afresh.
- There is a bursary available to cover costs for students from low income households.

**Top facts**

BMAT can be taken in either August or October during the year you apply to medical school. Check the BMAT website to find out the registration and test dates.
The most useful preparation you can do for an admissions test is practice. You need to be willing to put in a significant amount of work. However, you don’t need to pay for specialist courses and support; BMAT has lots of advice and other materials on its website, including preparation guides and all of the past exam papers. Reading example questions and working through the sample exam papers allows you to become familiar with the format of the questions, and helps you to recognise quickly what questions are actually asking you to do. It is particularly helpful to do some past exam papers under the same time constraints that you will face in the real exam, to get you used to the pace at which you need to answer questions in order to complete on time.

Check that your studies have covered the scientific knowledge that the test will be based on. The advice from the medical schools is that you do not need to pay for any additional help. All of the necessary support materials are available for free on the BMAT website.

The test results are only valid in the year that the test is taken and cannot be carried over to a re-application.

“Practice, practice, practice. Make sure you have looked at the sample papers and had a go at them.”
Samantha Mills, Year 0 medical student.
